Marquette City and County the Pride of Clover-Land

By A. K. Moore

AFTER you have traveled all over the world and seen all the wonderful things; after you have visited all countries noted for beautiful scenery; after you have made up your mind that you have seen all that is beautiful in the world, then come to the shores of Lake Superior, follow along its shores until you come to Iron Bay, then you will see the real beauty spot of all the world—that's Marquette.

Marquette's beauty is real, is natural and not of the manufactured kind. There are many beautiful places in our large cities made so by the work of man, and while our people have not been behind in the way of public improvements, nature has saved us the trouble of building parks, and scenery—it is here, plenty of it. Our people look upon all this as a matter of course. Many who have lived here all their lives fail to realize how much they are indebted to nature for all the

Marquette County Court House

Land cities, is just beginning to awake to its possibilities; until just now we have been content to take life easy. We were satisfied to float along, everyone making a good living without much effort, as a result of the large iron business which made work for a large number of men in the county, and a lot of opportunities to make money from the many natural resources right at hand were overlooked.

Near Marquette we have millions of acres of fine hardwood timber that has been waiting for someone to come along and manufacture it into the finished product. It has only been the last two years that we have paid any attention to this important feature of our resources.

A year or so ago, Mr. John D. Mangum was made secretary of the Marquette Commercial Club, and as a result we already have the Nufer Cedar Company located here, a new factory all built, which will be in full operation by the first of September, and em-

ploying about 100 men to start with.

Another concern, the Piqua Handle and Manufacturing Company, has also been secured, and will begin the erection very soon of a \$60,000 factory building, which, when in full operation, will employ, together with the allied industries that go with the Piqua plant, about 350 men. And these are not all. Other wood-working concerns are negotiating with us in view of locating their plants here, and it looks as if Marquette is in for a boom in a manufacturing way.

Another proposition that promises much for the future development of the city is the unlimited deposits of trap rock right in the city. There is one quarry working now and there is sure to be more in the near future, as the rock is of the best quality and can be quarried and loaded on boats at a very low cost, and the time is coming, and soon, when the country "down below" will be anxious to buy all they can get for road-building and

other purposes, and we have enough of it right here to build all the roads in the United States.

A few minutes' ride in an automobile takes one into as fine a farming section as can be found anywhere. Farming is another matter that has been overlooked until very recently, but great strides have been made in the last few years, and it will not be long before all the available farm lands in the county will be settled upon by a good class of farmers, and a good farmer can get rich on these lands, as there is a fine market for every thing that can be produced.

Marquette has The Pioneer Furnace, employing over 300 men, the Lake Shore Engine Works, employing nearly 200 men, the D. S. S. & A. railway employs about 900 of our citizens, the L. S. & I. railway about 500; the Schneider & Brown Lumber Company over 100 men, The Pickands Coal Com-

A. K. Moore, Manager of the Marquette Chronicle

wonderful advantages we have. It is the person who comes to us from away that fully appreciates the beauty of it all.

Take a stranger around our beautiful residence streets, around our natural park on Presque Isle, take him out on our splendid automobile roads up through the Iron Country, and through our rapidly developing farming districts, and he is astonished. Show him our fine County Building, our City Hall, the elegant Peter White Library, our modern St. Mary's and St. Luke's hospitals, and other public buildings, and he will tell you that Marquette is, without question, the biggest city of its size, and located on the most beautiful spot on earth. I have tried it on a lot of different ones and it has never failed to work out that way yet.

Marquette, like most other Clover-

Hon. W. H. Johnston, for years in charge of the great operations of the Oliver Mining Company

Lake Superior and Ishpeming Ore Docks at Marquette

CLOVER LAND

pany about 75, Spear & Sons about 75, The Consolidated Fuel and Lumber Company 40 men, the Upper Peninsula Brewery 25, the Marquette Steam Laundry about 60, and many other smaller concerns employing a smaller number of men, but all drawing good wages, and all the concerns are doing a thriving business.

Marquette is more lucky than some other Clover-Land cities in having a large number of people who are steadily employed regardless of how business conditions may be—that is to say, we do not depend altogether upon one line of business for our existence. The railroad companies employ a large number of clerks in the general offices that are not affected in times of depression. The county offices being located in the city, we have the advantage of the county payroll, as well as quite a number of other well-paid office men living in Marquette on account of this being headquarters for the firms they work for.

Of public buildings, Marquette has more and finer ones than most any other city of its size in the country. The County Building is the finest in the state outside of Wayne County, the City Hall and post office are in keeping with the other modern public buildings. The Peter White Library is a handsome stone building, thoroughly equipped in every way, and our two hospitals are as good as can be found in any city in the land.

In schools, as in other Clover-Land cities, Marquette is well in the lead of towns in other parts of the country. Speaking as one who has claimed Clover-Land as home for only a couple of years, and by making comparisons of schools and of graduates of Marquette's schools in a business way, I am of the firm belief that our schools are better in every way than those of lower Michigan. There are two things that most impress a new-comer to Clover-Land, and those two things are the fine roads and the many fine school buildings.

Marquette is fortunate in having the Northern State Normal located here. It gives our boys and girls an exceptional opportunity for higher education after they are through High school, and live at home while they are receiving it.

Another feature of our city that is sure to draw remarks from a person that visits us from away is our business streets. They are kept clean, as is the resident part of the city. Our store fronts are all modern, our merchants are up-to-date and alive; our streets are well lighted by the city lighting plant, and electricity is cheaper in Marquette than in any other

City Hall and Post Office Buildings at Marquette

part of the country, and the city plant is run at a profit to the city every year.

The City of Marquette, the county seat of Marquette County, is located on Lake Superior and is one of the most up-to-date and progressive cities in the Upper Peninsula of Michigan. Visitors from other parts of the country come to Marquette and are loud in their praise of its beauty—of the city's modern and up-to-date buildings, modern and well-decorated store fronts, its good streets, its exceptional educational facilities, its two fine hospitals, its many beautiful homes—and wonder why Marquette is not a larger city than it is. They will not have to ask this question much longer. The natural advantages of Marquette are bound to make the city grow, and in fact the growth and development have practically started. With the iron industry and the hardwood manufacturing plants that contemplate locating in the city, Marquette is bound to have a steady and healthy growth from this time on. It has been a long time in coming, perhaps, owing to the fact that up to very recently none has considered or attempted operations along hardwood manufacturing lines for the simple reason that hardwood manufacturers found plenty of timber farther south for their operations, but this southern timber is practically a thing of the past, and naturally hardwood factories must come where timber is plentiful.

The Upper Peninsula of Michigan now has the largest remaining tract of hardwood timber, and inasmuch as Marquette is centrally located in the peninsula, convenient to this large body of timber, and with her excellent shipping facilities, both rail and water, the city is naturally the logical place for these industries to locate.

Marquette is particularly favored as far as climate goes, being on the lake, the summers are all that can be de-

sired, and the winters are very mild as compared to other sections of Clover-Land.

A very large percentage of the iron ore mined in the world is shipped out of Marquette harbor. Its two ore docks are as large as any in the world, and the fact that a large amount of the iron ore is shipped out of Marquette harbor gives employment to a large number of railroad men as well as dock men.

There is no better city in the world in which to live than Marquette. With its beautiful automobile drive, beautiful scenery, healthy climate it is possible for Marquette people to enjoy life better and live longer than in any other city in the United States.

Negaunee a Thriving City

Negaunee is a thriving city of 9,000 persons, according to the last census, and is located in Clover-Land, the Upper Peninsula of Michigan, in the heart of the Marquette iron range. Its early history closely follows that of the development of the iron mining industry, to which it owes its existence.

The first ore found in the Lake Superior district was that discovered in Negaunee in 1844, at the base of an uprooted tree a mile southwest of Teal Lake. The honor of the discovery is divided among seven members of a party of government surveyors who were running township lines northward to the shores of Lake Superior. William A. Burt, deputy surveyor under Dr. Houghton, a government geologist, headed this party. He had been previously placed in charge of government surveys and geological examinations of the Upper Peninsula, and was one of the first men to make known to the world the valuable mineral lands of this region.

The surveying party reached the shore of Lake Superior on Sept. 15, 1844, and then struck out southwest, camping on the east end of Teal Lake on Sept. 18. The morning of Sept. 19, Mr. Ives, the compass man, noted a

freakish variation of his instrument, which was a solar compass with a magnetic needle, and reported it to Mr. Burt. The men were then ordered to look around to see what they could find that might cause the variation. They returned with specimens of iron ore, gathered from out-crops. The line they were running, on the first mile of which the discovery was made, later formed the eastern bound-

Mayor Fred H. Begole

ary of the section upon which the Jackson mine was afterwards found and opened.

In the Chippewa tongue, "Negaunee" means "head," and this name was given the little colony of miners that had settled on the eastern slope of the "Iron Mountain," on which all

(Continued on page 14.)

Statue of Father Marquette

Carpenter Cook Company's Successful Ishpeming Branch

By Roger M. Andrews

CHARLES I. COOK has made the Carpenter Cook Company one of the best known institutions in all Clover-Land, and placed it in the van of the great wholesale grocery houses of the middle west.

His success in Menominee county, his far reaching development work among both merchants and farmers, is well known. The canning factories he has built have sent their products to the four corners of the earth, and he had literally distributed millions of

Howard K. O'Keefe,
Manager of Purchases and Sales

Charles I. Cook of Menominee, one of the best friends Clover-Land ever had

and he quickly observed the qualities which speak for success. So he took Mr. O'Keefe away from the railroad and turned what would have been a bully good railroader into a most successful wholesale grocer. In a few years the entire sales and purchasing departments came under Mr. O'Keefe's direction, and he has made good in every way.

John N. Olson began in the office of the Carpenter Cook Company in Menominee. He developed into a mighty

John N. Olson,
Financial and Credit Manager

cans and packages of wholesome delicacies bearing upon each package the advertisement, "Made in Clover-Land."

In 1901, with a keen foresight which has been characteristic of his business movements, Mr. Cook saw the wholesale grocery possibilities of the central part of Clover-Land, and decided that they were sufficient to warrant the establishment of a branch house at Ishpeming, to work with the home concern but to give service to the merchants from a direct distributing center in the heart of the great Marquette district.

And so the branch house was started on Nov. 1st, 1901, with a total of six people upon its pay roll and with the energy and optimism of Mr. Cook behind the enterprise.

Filling a great commercial need from the beginning, and builded and added to upon the broad plan of service which distinguishes every part of the great Carpenter Cook Company

organization, the Ishpeming branch has had a most phenomenal success, until today it is one of the leading institutions in the iron country, employing from twenty to twenty-five people, sending its missionaries of good business, good groceries and Clover-Land optimism over a wide territory which yields annually nearly three-quarters of a million dollars of business.

The Carpenter Cook traveling men radiate enthusiasm and, while they are selling their goods also give to their customers the modern sort of commercial co-operation, studying their patrons and their localities, and ever ready to boost for any enterprise which means the betterment of their

district in particular or the whole of Clover-Land in general.

Credit for the success of the Ishpeming branch of the C. C. Company is shared with Mr. Cook by the two hustlers who have strenuously worked towards its permanent success, Howard G. O'Keefe, the manager of sales and purchases, and John N. Olson, manager of the credit department and the finances of the Ishpeming branch.

Mr. O'Keefe is well known in the upper peninsula. He was intended for a railroad man and was a member of the crew of the morning passenger train on the North-Western road out of Menominee to Ishpeming. Mr. Cook became acquainted with the young brakeman while traveling to and fro,

good bookkeeper, and Mr. Cook decided to offer him a larger opportunity at Ishpeming. His success has confirmed the wisdom of this selection in every way. Mr. Olson has done more than to make a successful financial manager and a remarkably discerning credit man. He has familiarized himself so thoroughly with his territory and customers that his relations with them have taken on a friendly advisory capacity, and many a merchant is grateful to Mr. Olson for the friendly help and counsel which he has given them in problems not at all directly related to his business.

The Carpenter Cook Company Ishpeming branch is more than a commercial success. It is a factor of the business life of the iron country and a monument to the confidence which Mr. Cook has in his young men and his faith in genuine co-operation and profit sharing among employer and employes.

BIG TIMBER DEAL ON.

A deal which means that 43,000 acres of fine timber land, practically all of which is situated in Chippewa county, will be acquired by the Consolidated Lumber Company of Manistique, is about to be put through. The timber lands are tributary to the Tehquamenon river, and include the town and mills of Emerson. The property is known as the Fred Chesborough tract, and has recently been involved in litigation. It is estimated that it will be acquired by the Manistique company at considerably less than actual value. The company has taken an option on the property. It is one of the largest bodies of standing timber in Michigan, 30,000 acres containing approximately 200,000,000 feet, mostly hardwood. This timber will be manufactured at Manistique, providing a satisfactory haulage contract can be made with the Soo Line, and

if tax values on the plant property are placed on the same equitable basis, enjoyed by competing lumber companies. The Consolidated Lumber Company has long been contending for a lower assessment on its plant and non-productive property, and now that the company proposes making a large investment for the purpose of bringing large additional timber holdings to Manistique it is expected that some inducement will be offered at this time.

If consummated, this deal will mean more to Manistique than any other industrial event in the history of the city.

ISHPEMING KNIGHTS OF PYTHIAS

Ishpeming Knights of Pythias are today boasting of one of the finest Club rooms and lodge buildings in Clover-Land.

The two story red brick structure,

planned by that successful architect from Menominee, Derrick Hubert, was completed only a short time ago and today it stands as a monument to the progressive lodge members of Ishpeming.

The building is large and airy and presents a most pleasing aspect both from within and without. It is thirty by ninety-three feet and is trimmed with terra cotta. It has numerous windows and is well heated and lighted thus adding materially to its internal beauty.

The club and lodge rooms are on the second floor. The club apartments are in the front section containing pool and billiard tables and card and reading tables. The lodge rooms to the rear are complete with paraphernalia and have dimmed electric lights which may be used if necessary in initiatory work.

A most interesting feature is the

fact that the four pedestals are fitted with Verde Antique marble tops, thus being the first marble mined by Michigan Verde Antique Marble company which is operating just north of Ishpeming.

The dining room, kitchen and pantry are located on the first floor and 125 persons can be accommodated at one time.

"BOOSTING."

Now it's dead easy to boost something new,—and know
That others are boosting it too!
But to boost all alone—
Where there's no backbone
Why, it's hard boys, it's hard,—that so!

But when you're once out
And have been a good scout,
They'll join you and help you, old pard;
So it's up to you
To start things anew
'Tis only the starting that's hard.

CARL W. GENDER,
Ironwood.

SLEEPER'S SPLENDID RECORD.

While all the Republican candidates for governor of Michigan have friends in Clover-Land, the great majority who live in these fifteen counties seem to favor strongly the Hon. Albert E. Sleeper of Huron county.

Mr. Sleeper's splendid record as state treasurer and his absolute business integrity in his private affairs have attracted the cordial support of thousands of Upper Peninsula voters who want efficiency more than mere politics.

Mr. Sleeper has been endorsed by more weekly newspapers, close to the people, and more farmers, working men and business men not actively identified with politics, than any other man who ever ran for governor of Michigan.

In commenting on the political situation the Gladwin Record, under date of July 6th, says:

The candidacy of A. E. Sleeper for governor is being received with great favor by the press, and in his canvass he has received a cordial welcome in all parts of the state.

Following are some of the things he has said about our state government and some needed reforms, which will be given a hearty response by taxpayers:

"I don't mean to infer that the average Michigan voter, farmer and business man wants to shirk his taxes or that his habit is to grumble about them, if they kick when they do not see proportionate benefits from this large increase of taxes. Neither do I wish to be misunderstood as to the growing needs of this state and its great institutions. None of them should be crippled or stunted, but what I want and stand pledged to secure if possible, is a dollar's worth of service to go out for every dollar of taxes that goes into the State Treasury. When this becomes true the people will not complain of their taxes. This is but fair, and just, and honest and who would think of running his private business in any other way. And why should the state's business be run in any other way?"

"The average tax payer does not understand, and I do not understand, why taxes are three times as big as they were six years ago.

"But, again, I say, don't misunderstand me to imply that there has been dishonesty or willful extravagance in former state administrations. I don't believe so. But I do think and believe that there has been needless

waste of public funds, loose and un-businesslike methods used, log rolling appropriations made, and a lack of business system generally. The governor can have a large part in correcting these abuses. If I become governor I promise to assume this part.

"This is not a time when we should confound the great economic questions or the general welfare with the great moral issues, which should always enlist our support regardless of partisanship.

"It is true that we have several local issues of importance, but the people are going to settle them right, as they always do. Our need of legislation is not pressing. Our state is now in the very forefront of advanced and progressive legislation. We do not stand so much in need of law enactment as we do of law enforcement and of a just and righteous interpretation of our laws.

"The people are not asking for more administration, but more economy in administration."

"I want to go on record with you, that if my candidacy is successful I am going to try mighty hard to do away with needless expenditures of public dollars, loose business-like methods and the lack of system which prevails generally at the present time in this state. We are both unfortunately only too well aware that the tax rate is increasing each year in a manner not warranted by our growth of population or our increasing tendency towards social legislation, and it surely therefore becomes the duty of every citizen to eliminate the voting away of public money for purely log-rolling purposes, and I am going to do my share if you'll help me. If you stop a minute and look up my record as state treasurer, I know you'll realize I am absolutely sincere in this promise."

THE CLOVER-LAND TRAIL.

One of the greatest celebrations ever held in the upper peninsula of Michigan was that at San Souci, almost on the county line between Gogebic and Iron counties, on July 22nd to commemorate the opening of the "Clover-Land Trail," the great trunk highway that links the west and the east of the upper peninsula.

From 1,500 to 2,000 persons took advantage of the splendid weather to get together and properly celebrate the opening of this highway, one of the finest stretches of road in the state.

Hundreds of automobiles in both counties were busy all afternoon conveying the visitors from all parts of Clover-Land to the scene of the celebration, which is located on the shores of Tamarack lake, the beauty spot on the trail.

At the lake a barbecue was held at which there was roast ox, sheep, ham, sweet potatoes, sweet corn, and other eatables. Following the dinner, hour addresses were made by Frank F. Rogers, state highway commissioner, Mayor Sherman T. Handy of the Soo, Senator A. T. Roberts of Marquette, George W. Rowell, Jr., secretary and manager of the upper peninsula development bureau; J. A. O'Neill, prosecuting attorney of Gogebic county, and Roger M. Andrews of Menominee.

A program of sports was also carried out, consisting of wrestling and boxing matches, clay pigeon shooting, baseball and log rolling contest, in which Gogebic county pitted its best athletes against the athletes from Iron county.

Both counties are recognized as pioneers in road building, both having bonded for nearly \$500,000 to build good roads, and that they have succeeded is admitted by the tourists who have already visited the northern country. From the east line of Iron county to the west point in Gogebic county, through which this trail runs, is a distance of 150 miles, every mile of which is constructed under instructions and specifications of the state highway department and has been accepted by the department. Part of this trail passes through the finest virgin hardwood timber.

GEORGE W. ROWELL, JR.

By their unanimous action in appointing George W. Rowell, Jr., formerly associate editor of the Clover-Land magazine, as secretary-manager of the Upper Peninsula Development Bureau, the bureau directors made a happy selection.

The new bureau head is fitted through natural ability, training and inclination for his new task. Young, enthusiastic, optimistic, with a happy faculty of making and, more important, of keeping friends, an earnest and pleasing public speaker, a newspaper man of rare ability, with an abounding faith in the future of the empire above the straits whose herald he has been appointed—Mr. Rowell is just the type of man to do the work of the bureau in a way that will bring results.

The writer knows the new bureau manager probably more intimately than any other man. He will never make a prouder claim for distinction in the line of friendship than that George Rowell is the best friend he has on earth. No man ever had a better, proof of which George Rowell has given innumerable times during the upwards of five years the writer has been in intimate association with him, sharing the same room most of that period.

W-o-r-k, with a capital 'W,' has been the watchword which has spelled success for Mr. Rowell. Born in Menominee Falls, Wis., thirty years ago last April, he first demonstrated his aptitude for business by monopolizing newspaper deliveries in his home community during the period in which he was completing courses in the grades and high school. His ambition caused him to work his way through Beloit college, where he went at the end of his high school course. Incidentally, he gathered some valuable experience during this period for his future newspaper work as editor of the college weekly and annual and as reporter on daily papers in Beloit, the latter occupation being one of the sources of revenue which made his college course possible.

After graduation he did field work for the Wisconsin Sugar company, but the call of newspaper life was too strong and in 1912 he started work as a reporter on The Milwaukee Sentinel, later going to the Associated Press and still later back to the Sentinel, in the latter case to accept a position as night editor. In the fall of 1914 he first saw Clover-Land, going to Menominee as managing editor of The Herald-Leader.

It was the decided success he had made in Menominee and the numerous friends he had gathered in the city at the gateway to the peninsula that attracted the attention of the bureau directors to him. After the

Gibson fiasco when the question of naming a bureau manager came up, Mr. Rowell's thorough knowledge of the newspaper and publicity game won him the appointment. The place sought the man and not the man the position. Since that time he has also been chosen head of the Press association of Clover-Land.

He has gotten settled in his headquarters at Marquette and talks modestly of what he intends to accomplish, preferring to let the results as they develop talk for themselves. And unless we miss our guess the results will be laudatory.

You want to meet George Rowell. He has some ideas worth listening to. And, besides, he's a mighty fine Scout. H. E. Bacon.

One of the largest rafts of pulpwood ever towed out of Little Bay de Noc was taken out by the tug Ames of Green Bay. The value of the 3,500 cords in the raft was \$18,000, sold by the Land and Timber company of Escanaba to the Green Bay Pulp and Paper company. Two additional booms of similar size will be forwarded to the Green Bay firm by the Land and Timber company.

Erland Tahtinen has been awarded a contract by the board of Ontonagon township, Ontonagon county, to build one and one-fourth miles of road to connect the South Flint Steel road with Greenland.

THERE IS ROOM—

There is a great slogan in Clover-Land, It is one which is very true, And I hope all of you will agree with me too.
When I say, "There is room in old Glory for another star,"

If you are a lover of Clover-Land, As I hope you all are, You will quite agree with me when I say,
There is room in old Glory for another star.

Old Glory is a fine old flag, But it isn't quite complete, But if it had one more great star, It would look very neat.

If old Glory had another star, It would brighten up its fame, As this star would stand for Superior, Which is a pretty name.

There are some persons who still think, Of the State of Superior as a joke, But if we showed them some statistics, They would topple o'er the brink.

The state-to-be, by the name of Superior, Is worthy of prosperity and fame, And all lovers of Clover-Land, Are worthy of the same.

ANONYMOUS.

A COPPER COUNTRY OPINION

(From a recent issue of The Hancock Copper Journal.)

Albert E. Sleeper, of Bad Axe, Michigan, candidate for governor, is a likeable man, a good neighbor, a good friend, a good citizen, and he is also a thorough business man.

He has won success by his own effort and hard work, and there is a strong sentiment, not only in Michigan but throughout the entire country that we should have more business men taking an active part in the affairs of government. With Albert E. Sleeper governor of Michigan, the state would be assured of a business administration of its affairs.

As state treasurer Mr. Sleeper gave that office one of the best administrations it ever received, putting its affairs in splendid shape, thereby also adding to his reputation and record as a man of great executive ability, one well qualified and abundantly able to handle large affairs. He is a man who not only makes friends, but who keeps them. All up and down the state there are men enthusiastically working and boosting for Sleeper, because they believe in him and know what kind of man he is, and say he will make good. He has no strings attached to him and believes in making the taxpayers' dollar earn 100 cents and do 100 cents' worth of work.

CLOVER LAND

Negaunee City Hall

within the city limits has been found so high, that in proportion to its size and population, Negaunee is one of the richest cities of the country.

Ishpeming a Mining Center.

Ishpeming is still pre-eminently a mining center, and the time when the city will boast of diversified industries has not yet arrived. However, the trend seems to have started in this direction and during the last year one

take its place as the metropolis of the Upper Peninsula. That time, it now appears, is not very far distant.

Its scholars from the schools have gone out to win honorable places in the business world, and it is known far and wide as a desirable town in which to bring up children.

Its banks are prosperous and solid, its merchants honorable and progressive, its atmosphere bracing and its water pure. Nowhere will you find a laboring class that has as large a proportion of its members regular attendants and consistent members of churches as here.

MARQUETTE AND COMMISSION GOVERNMENT

(By Hon. F. H. Begole.)

The solution of civic problems is contingent, fundamentally, on a progressive citizenship. Progress in citizenship is dependent on leadership and environment.

Human selfishness is a prime factor in bad government. Procuring a job at the city hall, in the fire department, or on the police force for brother John or cousin Joe, has very often been the determining force in city elections. So long as society maintains its present status, perhaps to the millennium

Hon. J. M. Longyear of Marquette

mayor-council system of government nurses partisan politics from which most of the corruption of municipal governments emanates. It is an open

MARQUETTE CITY AND COUNTY THE PRIDE OF CLOVER-LAND.

(Continued from page 4.)

of the mining operations were at first concentrated.

The city has fulfilled the significance of the name it bears, which in free translation may mean "foremost," "pioneer"—an idea of primarity and advancement combined — for its growth has been steady.

With the aid of science in recent years, some knowledge of the extent of the iron ore deposits has been gained, and the location of vast beds of ore has been ascertained. The diamond drill has been one of the greatest aids to the explorer, and through its use the existence of covered deposits of ore, until recently unsurmised, have been discovered. There is every reason to believe that from year to year other discoveries will be made; but even without these, the industrial stability of the city for years to come is assured. Fourteen mines are being operated in the city, and there is promise of at least two new ones being opened within the next few years. The value of the minerals

new industry has been added to the business activities of the city. This is the Meen Brothers' creamery, which is to be housed in a brick building now being constructed near the Consolidated Fuel & Lumber Company's yards.

The marble industry has also received new impetus and the celebrated verde antique deposits north of the city are, it appears, to be finally worked with profit. Two marble quarrying concerns, Carter Brothers and Williams, are operating on a limited scale. Some very fine marble has been quarried and if the product can be quarried and brought to market profitably, there is little question that the industry will be a considerable one.

Ishpeming is today a better city by a considerable margin than ever before. The outlook is most promising. A splendid ore market is now a certainty. The population of the city is slowly increasing and there is every reason to believe that the increase during the next year will be rapid. New industries are contemplating locating here, and when the mines are working full tilt and other business is booming Ishpeming will once again

Beautiful Presque Isle Park, Marquette

Ishpeming High School

dawn, human selfishness must be viewed attentively.

The mayor-council system provides an excellent medium for obtaining personal preference in city government. It is susceptible of much under the table work. Obtaining favorable action on equitable legislation by a common council often necessitates the employment of an expert in chicanery. Many of our large cities have come to recognize this condition of affairs as a necessary evil! something to be accepted and condoned in order to achieve results; a condition that had driven some honest men out of politics and has kept many good men from entering public service. The

door for the entrance of human selfishness.

Commission government has by no means attained perfection. The best that can be said for it is that it is on the way. Excellent as has been the progress made during the last two years by Marquette toward better governmental conditions, I am of the opinion that there is still room for much improvement. The general manager-ship plan should be fully considered and eventually adopted.

Our present form of government is simply a result of a large amount of intelligent dissatisfaction with the mayor-council system as expressed by

Be it Ever So Humble, There's No Place Like Home

By Hon. H. T. Huber of Mississippi
(Mr. Huber Spent His Boyhood at Champion in Clover-Land)

"Clover-Land," one of the best papers of its kind which has been my pleasure to examine, has invited me to write my earliest recollections of that quaint little village, Champion, nestled between two hills and within two miles of the beautiful little Lake Michigamme or "Como" of the U. P.

Hon. H. T. Huber

of Michigan. Twenty-five years have passed since my boyhood days in that beautiful village, but the early recollections of the dear old log home and those who were called our friends and neighbors are as fresh to me as if I left but yesterday. No spot since that time ever seemed grander to me, especially on a beautiful summer morn-

ing as the sun first looks over the hills of that quaint old town.

I have often stood in the doorway of my father's home. Even tho it was rudely built of logs, it was a palace and within it reigned a queen, my mother, who reared a family of six children. I could see across the valley on the hillside the furnace and its kilns, burning day and night and employing many men. In those days Champion was blessed with one railroad running between the cities of Marquette and Houghton, but in the late eighties the C., M. & St. P. railroad and the C. & N. W. railroad built into Champion, because they, too, were after the great output of iron that the Champion mine was then producing. The mine was known as one of the best hard ore mines in the world, and under the leadership of Capt. Pascoe and his lieutenants the mine always ranked "first of its kind." Champion became surrounded with mines in the early eighties, Keystone and North Dalaby were among the next best producers.

The forests in those days surrounding Champion were logged by Michigan and Wisconsin firms. The men generally went into the woods as early as September 15th, and remained until April 15 of the following year, and I well remember what a jolly time these "stern men of the woods" would have when they struck our village. As the ice broke in the spring the "drive" would commence some miles up the

Peshekee river to Lake Michigamme, and the logs were afterwards loaded on flat cars on the D. S. S. & A. R. R. and hauled to Marquette, and from there rafted through Lake Superior, St. Mary's river and Lake Huron to Detroit. Champion was connected in 1889 by a railroad running from its

there came to us from the copper country Hon. J. B. Montgomery, and under his able leadership the then so-called schools were abandoned and a beautiful three story building was erected between the towns of Champion and Beacon. He remained in charge of that school until 1894, and

Splendid New School at Michigamme.

mines to Huron Bay on the coast of Lake Superior. The road was completed but never operated. It spans the beautiful River Peshekee more than thirty-five times during the course of fifteen miles, and surrounded on both sides by the beautiful hills and covered with pine, tamarack, spruce and other trees.

Champion always held a record for its school system. As early as 1884

during the latter years was ably assisted by Miss Helen A. Rice, and they had the honor to know that Champion High school stood first in the county, from a report made up by a committee sent out from the University of Michigan. This alone was sufficient to endorse Mr. Montgomery for something higher up when you consider Marquette, Negaunee and Ishpeming are cities of said county.

Marenisco is the Largest Township in Prosperous Gogebic County

That good roads are essential to rapid development is demonstrated in Gogebic's largest township, Marenisco, which has appropriated more money for county highways than a large number of more settled sections of Clover-Land.

The result of good and better highway campaign, so energetically cham-

villed on, or, in close proximity, to these highways. The communities have a desire in common to brush up, clean up, build up, in fact the sense that the world is looking them over causes them to feel their importance, for since the realization of good roads Marenisco has built a \$10,000 Town Hall, a hotel equal to any for its size

Marenisco Town Hall.

pioned by the various Clover-Land township supervisors, is evident in the prosperous village of Marenisco, which prior to overland highways was dependent upon railway transportation not only from distant points, but from and to adjacent cities as well. But with good roads, different conditions have arisen.

It is now nothing unusual in the course of a summer day to witness one hundred to one hundred and fifty automobiles en route from the Iron Ranges going east or west, and as Marenisco is centrally situated on this important highway it naturally affords an ideal stopping place for all.

An interesting feature in connection with the good road movement are the

in Clover-Land, the C & N. W. railway has erected a modern depot and the Presque Isle Lumber company has made arrangements for extensive operations with headquarters at Marenisco. After June 15th one can see from six to eight Pullman cars exclusively in the service of pleasure parties making Marenisco the terminal point, being conveyed by automobiles to different fishing resorts. All this activity can be directly traced to good roads and as is shown, good roads mean development.

Rapid progress is being made by Contractors Hall and Labby on the Ahmeek-Mohawk macadam road in Keweenaw county.

Lake Shore Engine Works Marquette, Mich.

What the I. STEPHENSON COMPANY TRUSTEES Wells, Michigan

**Offer to Homeseekers on the Sunny Side of
Clover-Land, the Upper Peninsula of Michigan**

CHOICE of 400,000 acres of land at prices ranging from \$10 to \$25 an acre for cut-over land.

A climate the same as upper New York, northern South Dakota and central Minnesota—this district is 600 miles south of the much advertised wheat belt of Canada. A variety of soils fit for all crops grown in the north temperature zone.

Good roads. Good schools. Good water and climate.

Home markets that now are forced to depend on outside communities for much of their food.

Railroad service that brings 10,000,000 people within a night's ride for farm products, and the equal of that afforded the farmers of Indiana, Illinois and Iowa.

An unsurpassed fruit country, protected by 1,000 miles of shore line along Lakes Michigan and Superior—a practical insurance against frost damage. A choice of five lines of farming.

Fruit---Dairying and Live Stock--Truck Gardening--Root Crops--Grains

The mines of the Gogebic range are now employing cull lumber for underground purposes in protecting men, sustaining ground, etc., whereas in former days the finest white pine and Norway pine were employed, the timber being of large size to maintain heavy burdens incident to the old Nevada wrecking system. This has all been changed under the modern

wrecking system which not only affords better protection to the miners but permits lighter timber to be utilized.

* * *

Excellent progress is being made by contractors with the laying of a new concrete highway in Allouez township, an experimental project being undertaken by Keweenaw county.

RECORD ORE SHIPMENTS.

Ore is moving from the mines in
Ishpeming and Negaunee at a record
breaking speed for this time of the
year; there isn't the slightest doubt
that a new record in the tonnage of
ore moved will be established this sea-
son. The demand at the start is by
far the heaviest ever experienced and
there have not been many seasons in
the past when a larger volume of ore
was shipped in mid-season than has
gone forward the past week. So far
as can be judged, the movement will
continue to increase until the limit of
the different railway systems handling
the ore has been reached, and this will
be only when every car the railways
own is in use.

Railroad and steam shovel crews
will be at work every Sunday and holi-
day during the season of navigation.
There has never before been a season
when there was such activity at the
docks, as the boats are being loaded
and sent on their way in the quickest
possible time.

I am pleased that you have been
successful in putting something before
the people of the Upper Peninsula
that will call their attention to the
fact that we have as much to offer as
a farming country as any of the other
new territories and I trust that before
the end of the summer we all can
show results.

* * *

Contractor Jno. S. Lindsay will be-
gin work in another week on the addi-
tion to the plant of the Escanaba
Steam Laundry. It will be of brick
and concrete and will cost about \$7-
500.

* * *

Michigan Pioneer and Historial so-
ciety is seeking historical sketches

A development association has been
organized at Ewen. W. H. McPhail
and his valuable paper, The Clover-
Land Press, are boosting the project.

Profits Through Location of Lake Shore Engine Works

THE Lake Shore Engine Works is one of Marquette's leading industries, giving employment to 120 men, with a pay roll aggregating approximately \$100,000 per year.

The Lake Shore Engine works operates a machine shop, foundry, pattern shop, and plate shop, and its new plant in the Ely addition is one of the largest and most modern plants north of Milwaukee. The site comprises 14 acres and on it is situated seven detached buildings consisting of office, pattern shop, pattern storage, foundry, machine shop, plate shop, and power plant.

The plant is well ventilated, heated, and lighted, and the surroundings very pleasant for the employees. The plant uses electric power entirely, supplied from the city lighting plant, although it is so equipped that sufficient power may be developed from its own equipment in case of emergency.

The Lake Shore Engine works was for many years operated without satisfactory financial returns, but in the past five years under the direction of F. H. Begole, president, and E. L. Pearce, manager, the plant has taken a new life and is today in better condition financially and commercially than it has been at any time in its history. The organization is a splendid one and the management takes great pride in the fact that many of its employees have seen service for a long period with this company. Several of its officers and its employees have been with the concern for 25 years.

The product of the Lake Shore Engine works is varied. In addition to its standard line of equipment it contracts for almost any equipment in iron and steel. The foundry supplies the large railroads and most of the large mining companies in the Lake Superior mining district with iron and brass castings. Among the many large contracts taken are those for the Min-

nesota Steel company, where approximately 7,000,000 pounds of iron castings have been shipped from the Marquette plant. The charcoal iron furnaces also provide a market for many of the products of the Lake Shore Engine works.

In the standard line of equipment which is manufactured by the Lake Shore Engine works are the piston valve and hoisting engines, rock drill sharpeners, diamond drills and supplies, electric hoists, bicycle sheaves and machine cut gears. In the plate shop are manufactured cars of all descriptions and sizes, and, in fact, anything in the plate and structural line. During the past year the engine works has shipped the product of this department to mines in California, Sudbury, Ontario, Porcupine, Ontario and New Jersey, as well as throughout the Lake Superior district.

Among the more recent and successful products of the Lake Shore Engine works is the Halby shoveling machine which is designed primarily for shoveling in drifts and tunnels. It is a machine for which there has long been a demand and on the development of which much time and money has been spent by mine operators and designers throughout the country. The Halby shoveling machine has proved to be a practical success and the company is now turning out a large number of these machines, most of which will take them to mines in Arizona, Colorado, Nevada, and in the iron mines of Michigan and Minnesota. There is a large field for these machines and there will be a great demand for successful machines to do underground shoveling. It is felt that the engine works will have in this machine, alone, a product which will tax its capacity within a year or two.

Douglas street at Sault Ste. Marie will be paved at an estimated cost of \$1,647.85 and Magazine street at a

BREAKS BUTTER RECORD

A hundred Holsteins in Chippewa county are more or less closely related to Michigan's greatest butter cow. The five - year - old Holstein cow, "Northern Fobes Demver," has made the state butter record for each of the four years she has been in milk. In some respects she is the world's greatest cow. This heifer was raised at the Newberry state hospital, but she is now owned at Emblagaard dairy, Marquette. Among a hundred or more Holsteins in this county, some are half - brothers or half - sisters to her and others are even more closely related to the champion.

Northern Fobes Demver's 7-day butter record is as follows:

At 2 years of age.....	22.47 lbs.
At 3 years of age.....	27.25 lbs.
At 4 years of age.....	35.94 lbs.
At 5 years of age.....	39.87 lbs.

Average for 4 years.....31,385 lbs.

The average for the first four years is a world's record. The average for the past two years is over 37.9 pounds of butter in seven days, another world's record. Her percentage of butterfat in milk reached 6.38 during a whole test, the world's Holstein record. At the time of completing her 5-year-old record of 39.87, no cow of any breed west of Buffalo had ever made so much butter in as short a time.

The Holstein-Friesian association of America is the largest and wealthiest live stock association in the world, and annually offers \$15,000 in prizes for the best producers of milk and butter. This young cow earned first prize, which has been paid over to the Emblagaard dairy. The bull calves from this great dairy cow sell for \$2,500 each, but her heifer calves are not for sale at any price.

The members of the Chippewa County Cow Club are happy to own stock related to this famous cow. They feel that they have certainly started right to improve the local dairy herds.

If plans under way are carried through to a final consummation there will be several additions to Manistique's factory industries, the most important of which is the new wood-working plant of the Consolidated Lumber company. Ten million feet of lumber will be used annually by the plant in the manufacture of its own products, and with that for outside concerns between twenty and twenty-five million will be consumed.

* * *

What is declared to be the most expensive as well as the most practical ore loader ever designed is the Keese-Gow loader, recently completed by Captain Frank E. Keese, general superintendent of the Oliver Mining company's properties on the Marquette range, and A. M. Gow, the company's assistant general master mechanic.

* * *

It is estimated that approximately \$1,000,000 will be spent on improvements in the Iron River district this year, about a quarter of this amount for buildings and residences, another quarter million by mining companies for buildings, and about half a million for new equipment and development work.

* * *

The 1917 convention of the Upper Peninsula Federated Italian societies will be held in Crystal Falls, it was decided at the recent meeting in Hancock. John B. Rastello of Calumet is president.

* * *

It is my opinion that you are filling a long felt want in giving us a magazine devoted to the entire domain of "Clover-Land."

James C. Wood,
Manistique.

* * *

Received a great deal of information by reading Clover-Land, regarding the Upper Peninsula, that I did not know.

Dr. C. D. Pettigrew,
Fort Wayne, Ind.

Beginning with Aug. 1, the Marquette Box and Lumber company, which has been operating a box factory at the Marquette prison, will become the selling agent for the prison factory, this being made necessary by the terms of the state law forbidding the continuance of contracts in the prison. The deal was brought about by the board of control of the Marquette prison.

* * *

The Calumet fraternities have assured all the men who have enlisted as soldiers that their dues will be paid for them while they are away in order that they or their families may receive the benefits to which they are entitled. The movement was started with the Calumet Lodge of Moose.

* * *

Congressman W. Frank James, of Hancock fired another shot in his anti-'pork' campaign as he introduced a resolution providing a constitutional amendment allowing the president to veto any individual item of an appropriation bill of which he does not approve.

* * *

Construction work on the new station building for the Chicago and North-Western railway company in Menominee was started on July 10th and the building will be ready for occupation in November. Charles Heimerdinger is local agent for the company.

* * *

and waved his arms frantically. Occasionally they could hear him cry out, and the wild screech brought new terror to the almost fainting girl.

They had barely time to touch the dock, leap up the hill, and into Jack's waiting car, before their pursuers had landed.

Mr. Rich had entirely forgotten about the disguise which he wore, and it made him more angry than ever to see that Alice paid no attention to his cries, but seemed to be in deadly fear of him. The heavy beard which he wore did, indeed, give him a striking resemblance to the lunatic, as pictured in the newspaper, and this fact, coupled with his frantic manner, gave

lowed, "you shall never marry my daughter, never." A pause and then a peal of laughter greeted this outburst. "Why, Mr. Rich, of course he can't marry Alice," said Jack, "I'm going to marry her myself," and he held out his arms to Alice.

"Jack and I became engaged last night, papa, dear," she said, and as she cuddled into Jack's arms, she added, "I intended to tell you just as soon as I dared."

Realizing now the ridiculousness of his position, Mr. Rich began to wonder who was the cause of all this trouble. His body ached all over and he was beginning to shiver with cold. His gaze encountered the disgusted detective, and he turned on him with scorn. "Get out of here, you," he cried, "this mess is all your fault, with your silly old disguise."

Warlock tried to explain with dignity, but to no avail and he was forced to withdraw with the taunts of his late companion ringing in his ears. He muttered remarks bearing upon the fickleness of mankind, as he hastened from the scene of his humiliation.

Mr. Rich was hustled into dry clothes and soon reclined in a Morris chair out on the comfortable porch. Between puffs at a fragrant Havana he pronounced a father's blessing upon his children, who, with arms about each other, sat on the steps at his feet.

About a month later he was again called upon to say, "Bless you, my children, bless you," but this time it was Susy and Will to whom his remarks were addressed. At a little later date he was called upon to act as godfather to the chubby twins of Mr. and Mrs. Patrolman William O'Flynn, though he never quite forgave the policeman for stealing "the best cook I ever had."

Three banks of the Iron River district are co-operating in a plan for financing boys and girls of the tributary farming section who desire to engage in hog raising, as a means of materially improving rural conditions and as a practical way of teaching business methods. Loans will be made to any and all boys of good standing and will be their personal affair. Representatives of the First National, the Miners' State and the Commercial banks of Stambaugh will adopt a uniform plan for making the loans.

Important results toward bettering the dairying industry in the upper peninsula are expected to result from the formation of the Clover-Land Dairymen's association, organized at a meeting in Marquette. Officers of the organization are F. H. Vandenberg, Marquette, president; C. V. Ballard, Iron River, secretary and treasurer, and the directors include L. C. Holden, Sault Ste. Marie, I. W. Byers, Iron River; R. L. Nye, Menominee and U. F. Tselin, Norway. It was announced that the next meeting would be held at he Soo.

Loggers in Baraga county are active. Calix Miron has entered into a contract with the Culver Lumber company of L'Anse to peel several hundred cords of hemlock bark and cut logs on the company's lands back of the Cadeau farm. It will take two seasons to complete the job, which is already well under way.

the runaways the impression that they were, in all truth, escaping from the clutches of two wild maniacs, bent upon their destruction.

Jack's car was not in the best of condition that day, and they reached the place but little in advance of their pursuers. Alice immediately threw herself into Jack's arms, gasping out something about "the lunatic—chased us all the way, save me, Jack, oh, save me," and clung to him with wild alarm.

Jack had been out watering the grounds with a powerful hose and now as the cray men ran up and he saw the foremost make a dash at Alice, he promptly turned the powerful stream full upon the luckless man. Gasping and choking, he tried to run through it, but the constantly gushing stream of water was too much for him. Half-drowned, he finally had the presence of mind to tear the disfiguring beard from his face, and Mr. Rich stood revealed, drenched to the skin and unable to speak. "It's father, it's father," cried Alice with astonishment and concern, and ran to brace him up.

It was some moments before Mr. Rich was able to talk, but when he had regained his breath he poured out his pent-up feelings in an outburst against Will Dunning.

"You scoundrel, you cur," he bel-

MARQUETTE CITY AND COUNTY, THE PRIDE OF CLOVER-LAND

(Continued from page 14)

the voters in the voting booths. It needs for its continued success thoughtful criticism by those capable of speaking. It needs a continuous and sustaining interest by all the people all the time. It needs a thorough awakening to the duties of citizenship, useful citizenship; individually and, to the proper degree, collectively, the duties and interests of a citizen coincide.

Perhaps the most pronounced advantage possessed by our new charter is in the elimination of the ward lines. Formerly Marquette was divided into five wards. This in effect created five separate and distinct communities, each possessing a certain clanishness and neighborhood pride in securing for itself the greatest benefits. Under commission government Marquette is now one municipal household. The interests of the entire city prevail over those of a single ward in the minds of every citizen.

We no longer hear the expression, "I live in the Sixth ward," but rather, "I live in Marquette, my city, and I am proud of it."

A Booster's Testimony.

The backbone of the Upper Peninsula is agriculture, and the backbone of agriculture is livestock; I care not whether it be cattle, sheep, poultry or hogs, or a combination of all of them. That depends entirely on a man's needs and likes. I was raised with the dairy cow and I have less desire to leave her now than ever before. I know that she is the greatest animal that God has left to man, and Clover-Land is the natural home for her on account of its splendid climate, its great variety of natural grasses, and abundance of splendid water. We have long realized the advantages to the dairy cow in the Upper Peninsula, but not until recently was this country recognized as a beef-producing section as well, which was clearly demonstrated recently by the splendid growth made on beef cattle in a single summer.

FRANK H. VANDEBOOM,

President of the Michigan State Dairymen's Association and Proprietor of the Marquette City Dairy.

The Michigan Electrochemical company, a new corporation with Menominee capital behind it, has been organized and will rush work toward a new plant to be built on North State street in Menominee. The concern will manufacture chemicals, a new industry in that section of the state. Edward Daniel, general manager of the Menominee and Marinette Light and Traction company, is president of the corporation which is capitalized at \$150,000.

and
Its Possibilities.

Editor Clover-Land Magazine:—

The July number of Clover-Land Magazine just received. Congratulations, it is a splendid issue.

I wish, however, to take exception to the little note in the editorial columns by "A Gladstone Friend," regarding the first photoplay produced in Clover-Land.

The Newman and Dietz concern made advertising moving pictures, not photoplays. Even the writing of a story around the advertising does not make an advertising picture, a photoplay. All Newman and Dietz pictures, taken in the Upper Peninsula were paid for in part and in most cases, entirely by individual advertisers. Naturally these paid advertisers must receive advertising in the amount of what they pay.

Necessarily then an advertising picture can not be a photoplay for the reason that a photoplay is an acted and filmed scenario, made for the purpose of amusing or entertaining an audience. The minute that you advise an audience to try "Dr. Bunk's Corn Cure" you make an advertising picture from what might have been a photoplay.

The Newman and Dietz concern also made moving pictures in the Soo, several months before the first photoplay was produced. The first moving pictures made in Clover-Land were filmed in the spring of 1912 by the writer.

No photoplays, however, had been produced up to the time that "A Tangled Trail" was filmed in October, 1915.

In the entire three reels of this picture, you will find not a suggestion of advertising. No Soo industries were used as a background and not a single sign-board is shown.

The producers of "A Tangled Trail" would be pleased to book this picture in Mr. Duggin's theater so that the people of Gladstone may see the difference between a real photoplay and an advertising moving picture.

I trust that you will enlighten our Gladstone friend in regard to the above matter.

Thanking you for past courtesies, we remain,

Yours respectfully,
CHIPPEWA FILM CO.,
Kenneth R. Eddy.

If Organized "THE WAGNER WAY" Your Organization Is BUILT TO STAY

Prosperity has struck Michigan—Is your city getting any of it?
Does your Commercial Organization need rejuvenating?
Has your Chamber of Commerce a large enough fund?
Should your Board of Trade have more members?
Is your Merchants Association doing things?

Most of THE FASTEST GROWING CITIES IN MICHIGAN have organizations that were built "THE WAGNER WAY."
